Insights

- **Overall screen time is high**, with children averaging **4.35 hours/day**, and **85%** exceeding recommended limits.
- **Pre-teens and teens show nearly identical high screen time** (around **4.5 hours**), higher than younger kids.
- **Smartphones and TVs** are the most used devices, with screen time slightly higher than tablets and laptops.
- **Weekend screen time (6.1 hrs)** is almost **double weekday usage (3.5 hrs)**.
- **Urban and rural usage levels are similar**, indicating consistent access and behaviour across locations.
- **Boys and girls have nearly equal usage**, suggesting screen exposure is not gender-driven.

Insights

- **Teens show the highest counts of negative health impacts**, including eye strain, anxiety, poor sleep, and potential long-term risks.
- **Urban children report significantly more health issues** than rural children—likely tied to higher device access and usage.
- **Both genders are impacted similarly**, though boys show slightly higher counts in certain categories (eye strain, poor sleep).
- **Eye strain, anxiety, and poor sleep** are the top three reported health concerns across all age groups.

Kids - Tv	4.01	11
Kids - Tablet	4.00	12

Insights

- Smartphone & TV users in Pre-Teens and Teens show the highest average screen time, indicating strong mobile and television dependency.
- Kids using tablets or TVs show the lowest screen time, suggesting more controlled usage in youngest groups.
- Overall, screen time rises as device portability increases.

Device X ScreenTime Cohort

Insights

- **Kids – Very High Usage** stands out as the **highest screen-time group overall**.
- **Pre-Teens follow closely**, suggesting early escalation in digital habits.
- **Low Usage cohorts** appear mostly in **Teens**, showing a mix: some teens self-regulate better.

Insights

- **Pre-Teens (Rural)** and **Pre-Teens (Urban)** have similar averages → location does not drastically change behavior here.
- **Kids (Urban)** show slightly higher screen time than Kids (Rural).
- **Overall: Urban children have marginally higher screen time across cohorts**, likely due to better digital access.

Insights

- Kids with **Poor Sleep** and **Anxiety** have the **highest screen time**.
- Kids in general show **higher screen time** when health impacts are present.
- Pre-teens fall in the **middle range**, with moderate screen time across conditions.
- Teens have **lower screen time** compared to Kids and Pre-teens.
- All **Healthy** groups show the **lowest screen time**.
- Eye Strain and Poor Sleep appear in the **top risk categories** across ages.
- Potential Risk and Obesity Risk groups show **moderate** screen time levels.
