

Milestone 4: Report and Presentation

Week 7: Visual Report or Dashboard Preparation

This report summarizes the work completed during Week 7 of the ScreenSense project, focusing on the development of the visual report and interactive dashboard. The goal of this milestone was to assemble a coherent analytical storyline, build a functional dashboard in Tableau or Power BI, and ensure clarity and consistency across all visuals.

1. Storyline Assembly:

The first step in Week 7 involved organizing all previously created visuals into a clear and logical narrative structure. Charts and insights from Week 1 to Week 6 were reviewed and arranged to follow a storytelling approach, beginning with high-level trends and moving towards deeper cohort insights.

The storyline created includes:

- Overview of dataset and demographic distribution
- Univariate and bivariate insights
- Device and activity usage patterns
- Weekday vs weekend behavioral changes
- Cohort-based comparisons
- Seasonal and time-based patterns
- Key insights and recommendations

2. Dashboard Development (Tableau / Power BI):

An interactive dashboard was developed using Tableau or Power BI to provide stakeholders with a user-friendly way to explore the screentime dataset. The dashboard allows dynamic filtering and comparison across demographics.

Key features included:

- Filters for age band, gender, and location type
- Device usage comparison visuals
- Activity category breakdowns
- Hourly and daily screentime trends
- Heatmaps for cohort intensity patterns
- Clean layout with intuitive navigation

3. Visual Clarity and Standardization:

To maintain professional quality, all visual elements were standardized. This included ensuring every chart had clear titles, axis labels, legends, and color consistency. Visual clarity was prioritized to make the report easy for non-technical stakeholders to interpret.

Enhancements applied:

- Unified color palette for devices, activities, and age groups
- Standardized axis ranges for comparability
- Clear descriptive titles explaining chart purpose
- Improved legend placement and readability
- Removal of visual clutter and unnecessary gridlines

4. Summary:

Week 7 successfully delivered a polished dashboard and a cohesive visual report. The storyline allows smooth flow from introductory data exploration to deeper insights, while the dashboard empowers users to interact with and examine screentime patterns across demographics. This milestone completes the presentation and prepares the project for final delivery.

DATA VISUALIZATION:

SCORE BY GENDER AND AGE

Age Band	female	male	Total
18-25	433	279	712
26-35	367	287	654
36-45	546	540	1086
46-55	325	252	577
56-65	291	414	705
Total	1962	1772	3734
